

TKC220-P, SOFT PAN TRIGGER ASSY

The TKC220-P is a trigger system by itself. Developed to ensure a consistent double strikes in the head-neck and thorax regions of mink by positioning the animal within the trap when he steps on it.

No conventional dog or forks are needed on the trap.

To install it, snap the anchoring two lips to the front bottom trap frame and squeeze the lips together with a pair of pliers over the frame just enough to hold. The trap can be boiled dyed and waxed, but you may have to remove the excess of wax.

Mink set up:

Use it in a wooden ground cubby box with long slotted side and the back end closed by a 2.5cm wire mesh, bait tied down 10 cm behind the center of the trap. The trap is placed with pan trigger inward and the set springs 10 cm away from the back of the side slots, secured by joining spring loops with flexible branches. It can be installed on almost any traps having a frame that fits the lips size, that is on trap with 1/4 dia. rod.
